Genes were predicted from the integrated results of the following:

Genes were predicted from the integrated results of the following:

GENSCANI.0, BLASTN2.0, BLASTX2.0 as well as SplicePredictor

(October 1998 version). The genomic sequence was searched against

NOBI NonRedundant Protein database, uith BLASTP2.0. ESTS represent

KGP, Protein homologies of the coding regions were searched against

NOBI NonRedundant Protein database with BLASTP2.0. ESTS represent

the identified CDNA sequences using BLASTN 2.0 with the

corresponding DDBJ accession no. and RGP clone in.

A gene with identity or significant homology to any protein name to indicate the homology to any protein name to indicate the homology to any protein name to indicate the homology to any protein but with a gene prediction program

is classified based on the protein and verlap with Polsasified as an 'unknown' protein. A gene predicted with a gene prediction of partial sequence) is classified as an 'unknown' protein of Polsasified as an overlap with Polsasified as any ender and any everlap with Polsasified as any ender and any everlap and assembly quality

The criminal of the sequence of Polsasified as any ender any e

Sequence is a mononucleotide (C) repeat with a single unique base (A) followed by another monoucleotide (C) repeat. A single subclone spans the region into unique sequence on both sides."
JSZ459. JSZ479
JOSZ459. JSZ479
JNOTE-WW believe the assembly to be correct. The sequence is a monoucleotide (C) repeat flanking a single unique base (A) which is followed by an additional monouncleotide (C) repeat. A single subclone spans through to unique sequence on both sides."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        17886 GACATCTCGGTGATGAGCGGCGCGCAGAAGTTCATGAAGAAGGACCTGAACATCTCGGAC

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.

The present invention relates to the isolation of plant polynucleotide sequences encoding an Arabidopsis thaliana-like sugar transport protein. The polynucleotide or beta wilgaris-like sugar transport protein. The polynucleotide sequences are useful for altering the level of sugar transport proteins in plants, i.e. for control of carbohydrate transport and distribution in
                                                                                                             Beta vulgaris-like sugar transport protein; carbohydrate transport; filling; annual field crop; plant; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid encoding plant sugar-transport proteins, useful fo
preparing transgenic plants with altered carbohydrate distribution.
                                                                                                                                                                                                                             Beta vulgaris-like sugar transport
                                                                                    Rice contig encoding Beta vulgaris-like sugar transport protein.
                                                                                                                                                                                                                                                                                                                                                                                                                 SV;

1981 g d ò d P & õ 음 장 S P P 8 8 g ò g S S S S ò g S G 충 8 8 g Q Dp à g à 0 plant cells, e.g. during grain filling of annual field crops (e.g. corn, rice, soybeans, and wheat), and, for studying carbohydrate flows and sugar transport. The polynucleotide sequences can also be used to isolate cDNA sequences and genes that encode homologues of the new proteins. The present sequence representing a contig assembled from various rice cDNA clones encodes a Beta vulgaris-like sugar transport protein 120 120 180 180 240 240 300 300 360 360 420 420 480 480 540 540 900 600 999 999 720 720 780 780 840 840 900 900 60 09 CTTACATGTAAGCTCGTGCCGGCACGAGCTTACACTCGACCGCCACTACTGTACACGGCC CAGAGCGAGCCTCCTCCTCTGCACCACCGGAGATGGCTTCCGCCGCGCTGCCGGAGG CCGTCGCGCCGAAGAAGAAGGGCAACGTCCGGTTCGCCTTCGCCTGCGCCATCCTCGCCT CCATGACCTCCATCCTCCTCGGCTACGATATCGGGGTGATGAGCGGGGGCGTCGCTGTACA TCAAGAAGGACTTCAACATCAGTGACGGGAAGGTGGAGGTTCTCATGGGCATACTGAACC TCAAGAAGGACTTCAACATCAGTGACGGGAAGGTGGGAGGTTCTCATGGGCATACTGAACC ACACCATCGTGTTCGCCGCCGTCATATTCTTCGCGGGGGSGTTCCTCATGGGTTCGCCG TCAACTACGCCATGCTCATGTTCGGCCGCTTCGTGGCCGGCATCGGCGTGGCTACGCGC CGTCGTTCCCGGAGGTGTTCATCAACTTCGGCATCCTGCTCGGGTACGTCTCGAACTATG CGTCGTTCCCGGAGGTGTTCATCAACTTCGGCATCCTGCTCGGGTACGTCTCGAACTATG CGTCCGTGCTCGCTCGTCATGGTGCTCGGCATGCCGGAGTCGCCGCGGGGGCTGGTCA CGTCCGTGCTGCTCGCGCTCATGGTGCTCGGCATGCCGGAGTCGCCGGGGGTGGCTGGTCA TGAAGGACGCCTCGCGGACGCCAAGGTGCTGGAGAAAGACCTCCGACACGCGGAGA AGGCCGCGGAGGCCCTGGCCGACATCAAGGCCGCCGCCGGCATCCCTGAGGAGCTCGACG AGGCCGCGGAGCGCCTGGCCGACAACAAGGCCGCCGCCGCCGCATCCCTGAGGAGCTCGACG GCGACGTGGTGACCGTCCCCAAGAGGGGAGCGGAAACGAGAAGGGGGTGTGGAAGGAGC CTTACATGTAAGCTCGTGCCGGCACGAGCTTACACTCGACCGCCACTACTGTACACGGCC CCGTCGCGCCGAAGAAGAAGGCAACGTCCGGTTCGCCTTCGCCTGCGCCATCCTCGCCT TCAACTACGCCATGCTCATGTTCGCCGCTTTCGTGGCCGCATCGGCGTGGGCTACGCGC TCATGATCGCGCCGGTGTACACCGCCGAGGTGTCGCCGGCGCGTCGGCGCGTGGCTTCCTGA TGAAGGGACGCCTCGCGGACGCCAAGGTGGTGGTGGAGAAGACCTCCGACACGGCGAGG Length 2017; ö Sequence 2017 BP; 389 A; 627 C; 582 G; 418 T; 0 U; 1 Other; Indels DB 6; .; 0 Query Match 100.0%; Score 2016.6; Best Local Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to the isolation of Arabidopsis thalianalike or Beta vulgaris-like sugar transport proteins, and the polynucleotide sequences encoding them. The plant sugar transport proteins of the invention have been isolated from corn, rice, soybean, and wheat. The polypeptides of the invention may be used for altering the level of expression of a sugar transport protein in a host cell, by transforming a host cell with a chimeric construct encoding all, or a portion of the sugar transport protein, in sense or antisense or instation. Particularly, the polypeptides may provide a means to control carbohydrate transport and distribution in plants. ASX3206.

The present invention relates to the isolation of plant polynucleotide sequences encoding an Arabidopsis thalians—like sugar transport protein or Beta vulgaris-like sugar transport protein. The polynucleotide sequences are useful for altering the level of sugar transport proteins in plants, i.e. for control of carbohydrate transport and distribution in plants, i.e. for control of carbohydrate transport and distribution in plant cells, e.g. during grain filling of annual field crops (e.g. corn, rice, soybeans, and wheat), and, for studying carbohydrate flows and sugar transport. The polynucleotide sequences can also be used to isolate obsessort sequences and genes that encode homologues of the new proteins. The protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      edecectrosredecedecaredeceradearacecretearearedececereaacace 484

The present invention relates to the isolation of Arabidopsis thalianalike or Beta vulgaris-like sugar transport proteins, and the polynucleotide sequences encoding them. The plant sugar transport proteins of the invention have been isolated from corn, rice, soybean, and wheat. The polypeptides of the invention may be used for altering the level of expression of a sugar transport protein in a host cell, by transforming a host cell with a chimeric construct encoding all, or a portion of the sugar transport protein, in sense or antisense orientation. Particularly, the polypeptides may provide a means to control carbohydrate transport and distribution in plants. ABX93206-ABX92311 represent cDNA sequences encoding Beta vulgaris-like sugar transport proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        οŧ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to the isolation of plant polynucleotide sequences encoding an Arabidopsis thaliana-like sugar transport protein or Beta vulgaris-like sugar transport protein. The polynucleotide sequences are useful for altering the level of sugar transport proteins in plants, i.e. for control of carbohydrate transport and distribution plant cells, e.g. during grain filling of annual field crops (e.g. corn, rice, soybeans, and wheat), and, for studying carbohydrate flows and sugar transport. The polynucleotide sequences can also be used to isolate obnA sequences and genes that encode homologues of the new proteins. The present sequence encodes a corn Beta vulgaris-like sugar transport
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              574

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       454
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel plant sugar transport proteins and nucleic acid encoding the protein useful for producing transgenic plants having altered levels of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to the isolation of Arabidopsis thalianalike or Beta vulgaria-like sugar transport proteins, and the polynucleotide sequences encoding them. The plant sugar transport proteins of the invention have been isolated from corn, rice, soybean, and wheat. The polypeptides of the invention may be used for altering tlevel of expression of a sugar transport protein in a host cell, by transforming a host cell with a chimeric construct encoding all, or a portion of the sugar transport protein, in sense or antisense or exticularly, the polypeptides may provide a means to control carbohydrate transport and distribution in plants, ABX93206-ABX93211 represent cDNA sequences encoding Beta vulgaris-like sugar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GATGGCTTCCGCCGCCGCTGCCGGAGGCCGTCGCGCCGAAGAAGAAGAAGGCAACGTCCGGTT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CGCCTTCGCCTGCGCCATCCTCGCCTCCATGACCTCCATCCTCCTCGGCTACGATATCGG

                                                                                  \delta
                                                                                                                           \delta
                                                                                                                                                                     \delta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to the isolation of plant polynuclectide sequences encoding an Arabidopsis thaliana-like sugar transport protein or Beta vulgaris-like sugar transport protein. The polynuclectide sequences are useful for altering the level of sugar transport proteins in plants, i.e. for control of carbohydrate transport and distribution plant cells, e.g. during grain filling of annual field crops (e.g. corn, rice, soybeans, and wheat), and, for studying carbohydrate flows and sugar transport. The polynuclectide sequences can also be used to isolate cDNA sequences and genes that encode homologues of the new proteins. The present sequence encodes a wheat Beta vulgaris-like sugar transport

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1238
